

# Take Action for Your Heart: Get Started!

**Heart disease is the leading cause of death in the United States, but it can often be prevented. Adopting a heart-healthy lifestyle can help you reduce the risk of heart disease and its risk factors. Take action to protect your heart by following these tips.**

## **Get Enough Quality Sleep**

**Lack of sleep or getting poor-quality sleep increases the risk of having high blood pressure, heart disease, and other medical conditions.**

- Try to aim for 7-9 hours of sleep a night.
- Go to bed and wake up at the same time each day.
- Exercise regularly, but not within 2-3 hours before bedtime.
- Avoid caffeine and nicotine.

## **Eat Better**

**A flexible and balanced eating plan can help lower your high blood pressure and improve your cholesterol.**

- Follow the [Dietary Approaches to Stop Hypertension \(DASH\) eating plan](#), which can help you create a heart-healthy eating style for life.
- Read nutrition labels to pick the food lowest in saturated fat, sodium, and added sugars.
- Try a mix of lean cuts of meat, eat fish once or twice a week, and eat two or more meatless meals each week.
- Consider whole fruits, dried fruits, unsalted rice cakes, fat-free and low-fat yogurt, or raw vegetables as a snack.

## **Stop Smoking**

**Any amount of smoking, even light or occasional smoking, damages your heart and blood vessels.**

- Select a quit date and write yourself a contract that outlines your **plan for quitting**.
- Talk with your healthcare provider about programs and products that can help you quit.
- Join a support group. Many hospitals, workplaces, and community groups offer classes to help people quit smoking.
- Call 1-800-QUIT-NOW and visit [\*\*smokefree.gov\*\*](http://smokefree.gov) to get additional support.

## **Maintain a Healthy Weight**

**Maintaining a healthy weight is important for overall health and can help you prevent and control many diseases and conditions.**

- Choose healthy snacks like fruits, vegetables, yogurt, or nuts, instead of sugary or high-calorie snacks.
- Stay hydrated with water as your primary beverage.
- Aim for at least 150 minutes of moderate-intensity aerobic exercise (such as brisk walking) or 75 minutes of vigorous-intensity (like running) exercise per week.
- Consider keeping a log of what you eat throughout the day.

## **Be More Active**

**Getting enough physical activity helps to lower your risk of heart disease and stroke.**

- Adults should spend at least 150 minutes (2 ½ hours) each week doing physical activity.
- Sit less! Take the stairs. Park farther away. March in place or take a walk around the block.
- Try muscle-strengthening activities like lifting weights, working with resistance bands, doing sit-ups and push-ups, or some forms of yoga—whatever works for you.
- If you don't have a lot of time in your day, try being active for 10 minutes at a time. Anything that gets your heart beating faster counts!

## Control Cholesterol

Unhealthy levels of **cholesterol** can lead to **high cholesterol**, which increases the risk of developing heart disease.

- Try the **Therapeutic Lifestyle Changes (TLC) Program** which combines diet, physical activity, and weight management to help lower high blood cholesterol and improve heart health.
- Eat a heart-healthy diet that is low in saturated fats, as these can raise LDL cholesterol levels.
- Limit alcohol consumption. Drinking too much alcohol—more than two drinks a day for men or one drink a day for women—can raise your total cholesterol level.

## Manage Stress

Learning how to manage stress with healthy coping strategies helps improve your emotional and physical health.

- Use relaxation techniques that combine breathing and focused attention on pleasing thoughts and images to calm the mind and body.
- Consider meditation, as it can help to **lower stress**.
- Take a yoga class to help lower stress and improve mindfulness. It may also offer you a supportive community.

## Manage Blood Sugar

Maintaining stable blood sugar levels is crucial for heart health, especially for people with diabetes or those at risk of developing diabetes.

- Eat a diet rich in whole foods, including vegetables, fruits, whole grains, lean proteins, and healthy fats.
- Monitor your carbohydrate intake and choose complex carbohydrates, like whole grains and legumes, to help control blood sugar levels.
- Talk to your healthcare provider about how often you should check your blood sugar levels, especially if you have diabetes.

## Control Blood Pressure

Keep your blood pressure in a healthy range and keep track of your numbers. Blood pressure that's consistently higher than 130/80 mm Hg can cause serious health problems.

- Have your blood pressure checked each time you visit the doctor.
- Use a blood pressure monitor to measure your blood pressure at home and **learn how to measure it correctly**.
- Use a **blood pressure tracker** to keep a record of your numbers each reading.
- If you're pregnant or planning to be, it's especially important to keep your blood pressure in a healthy range.

## Practice Self-Care & Find Social Support

Daily acts of **self-care** can benefit your heart because **self-care is heart care**. Studies show that **having positive social support, close relationships, and feeling connected to others makes it easier to stick to heart-healthy habits**.

- Try to do at least one positive action for your heart health each day.
- Make the doctor's appointment you've been putting off.
- Ask family and friends to text you reminders or encouragement to help you meet your health goals.
- Join an exercise class or a weight management group to connect with other like-minded people and stay motivated.
